

Trials with analysis-window RMS greater than preceding baseline RMS (%)

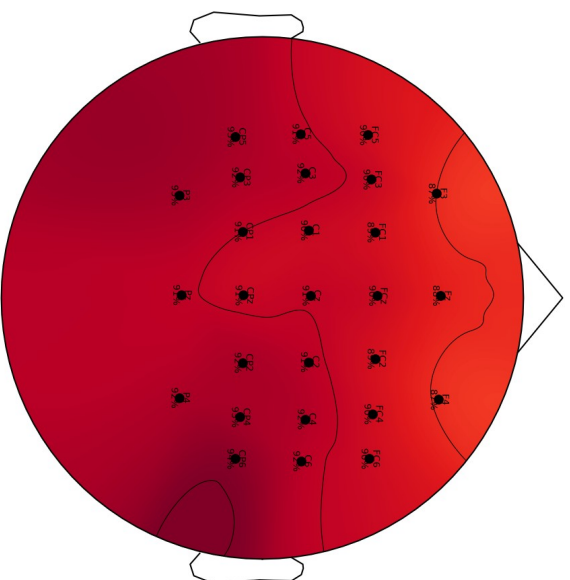

Gender 1 (Man) — Left-hand cue
45 participants, 3,600 events

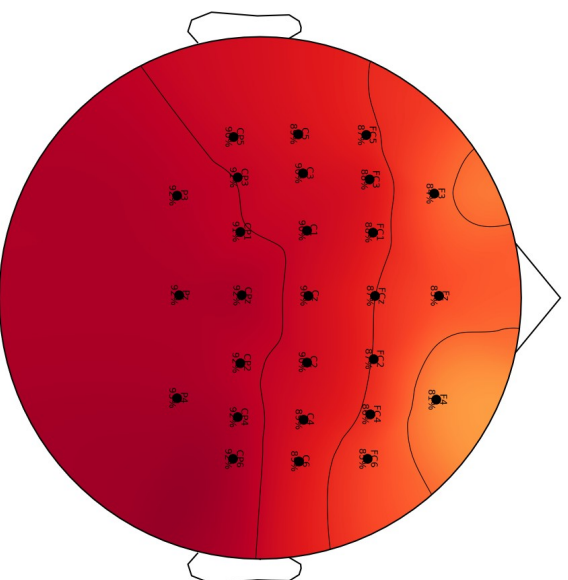

Gender 2 (Woman) — Left-hand cue
42 participants, 3,314 events

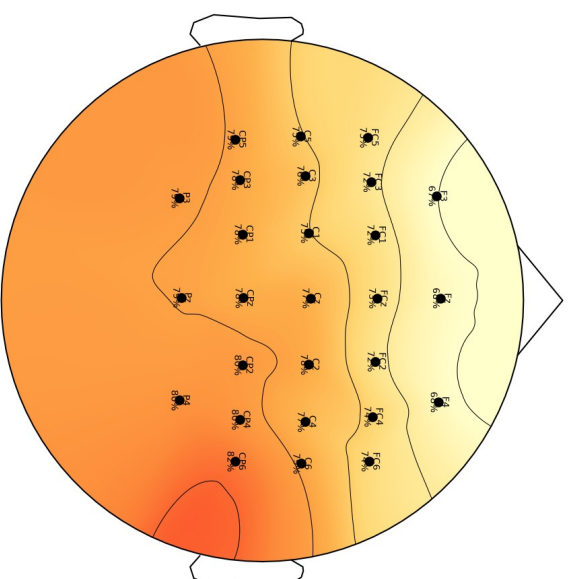

Raw-EEG Electrode Activation Likelihood by Gender: Cue vs. Control
Gender 1 (Man) — Right-hand cue
45 participants, 3,600 events

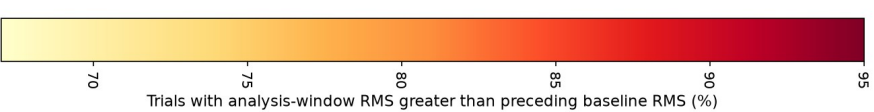

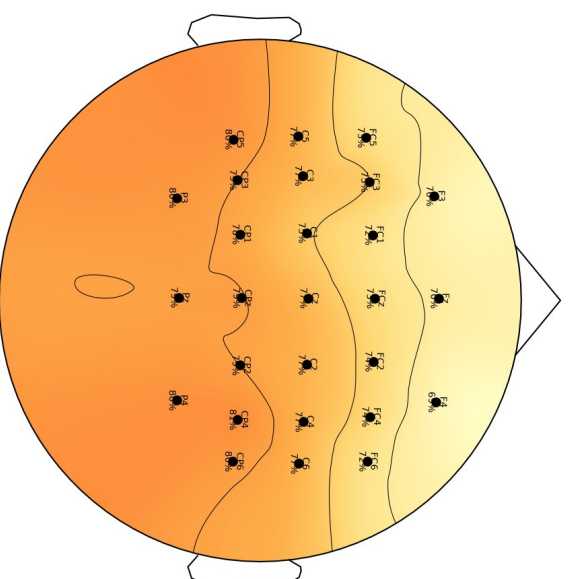

Gender 2 (Woman) — Right-hand cue
42 participants, 3,318 events

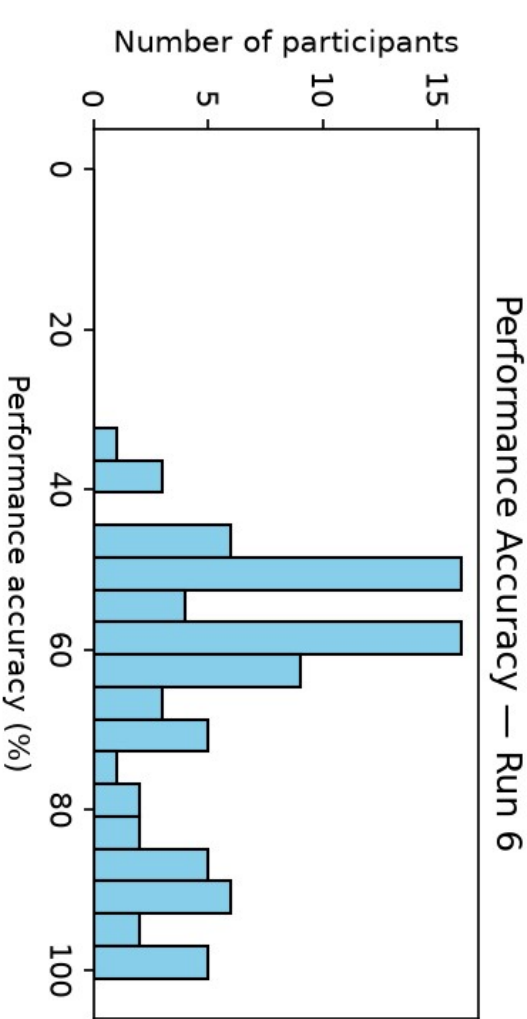

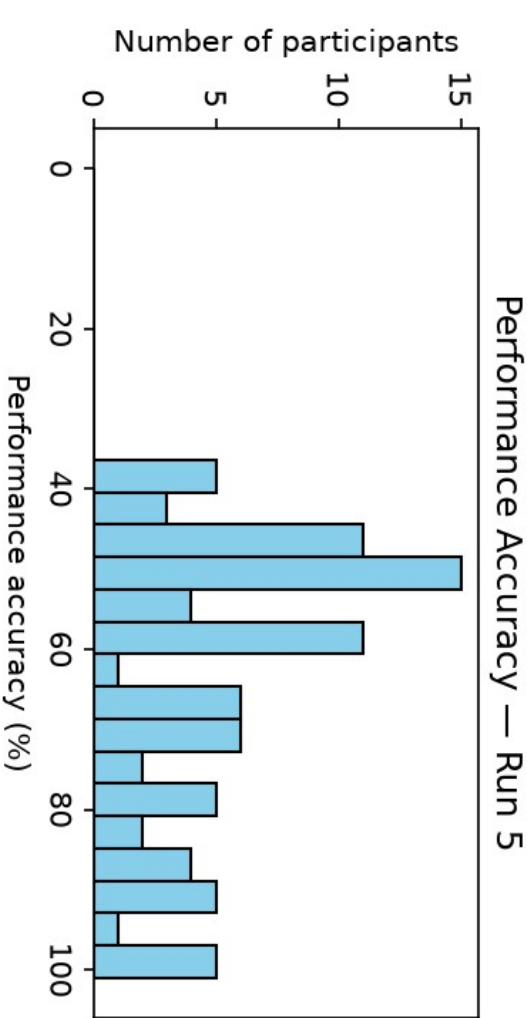

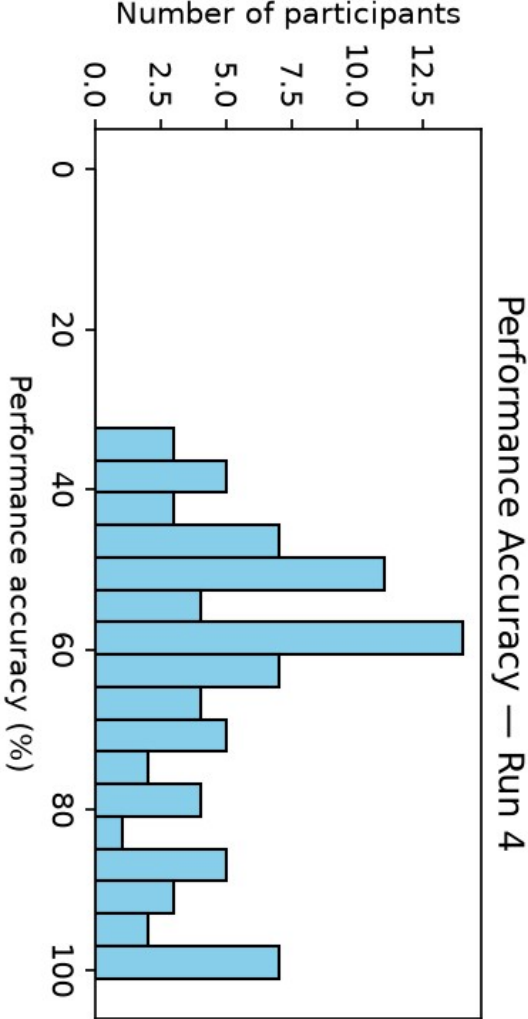

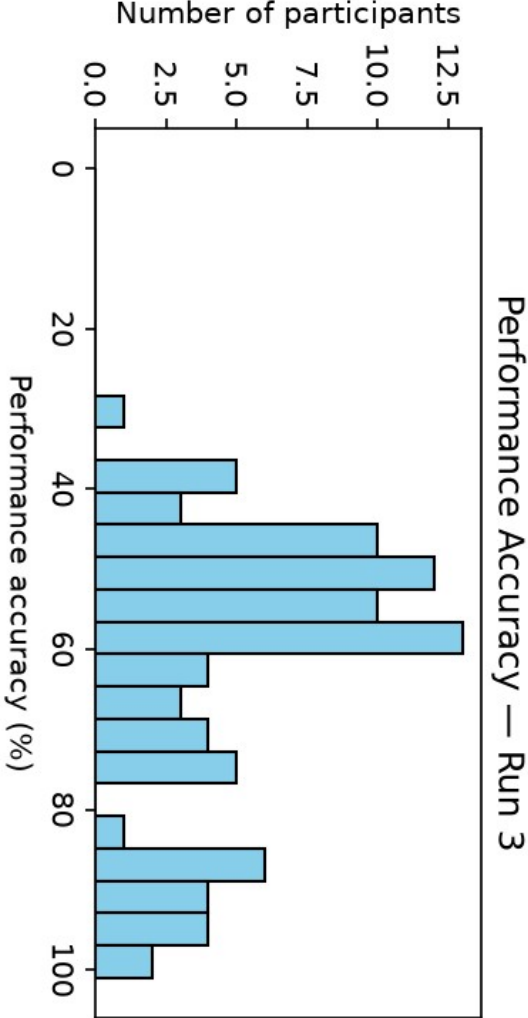

Gender 1 (Man) — Non-stimulus control
45 participants, 3,569 events

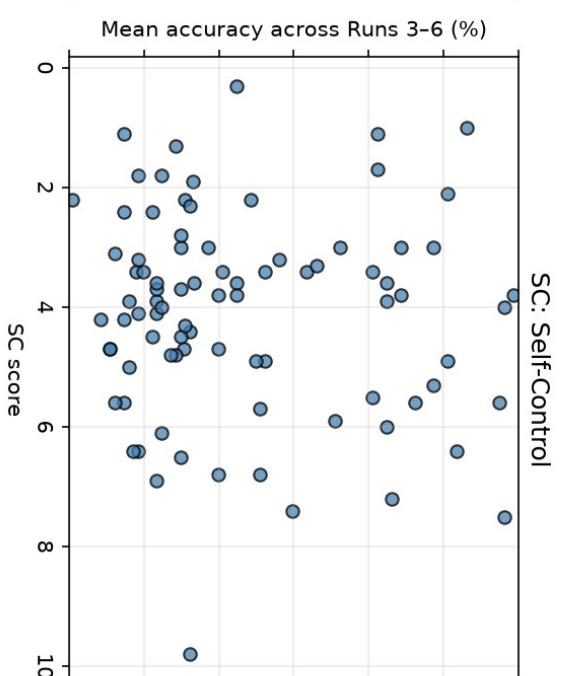

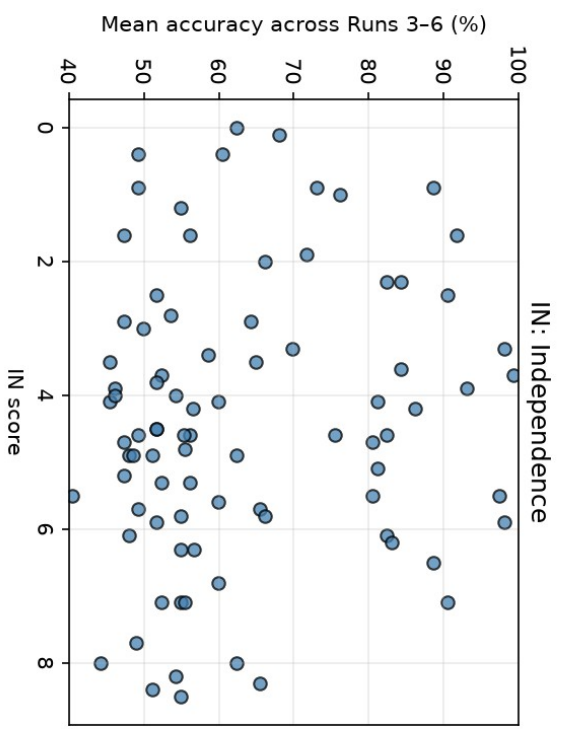

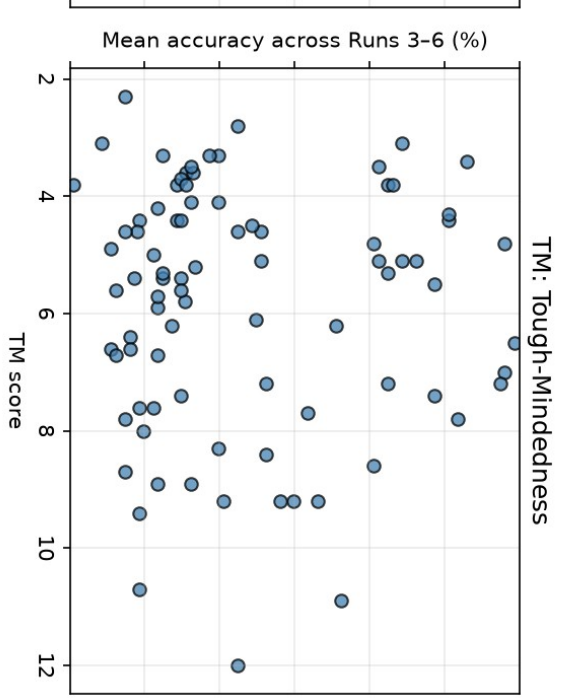

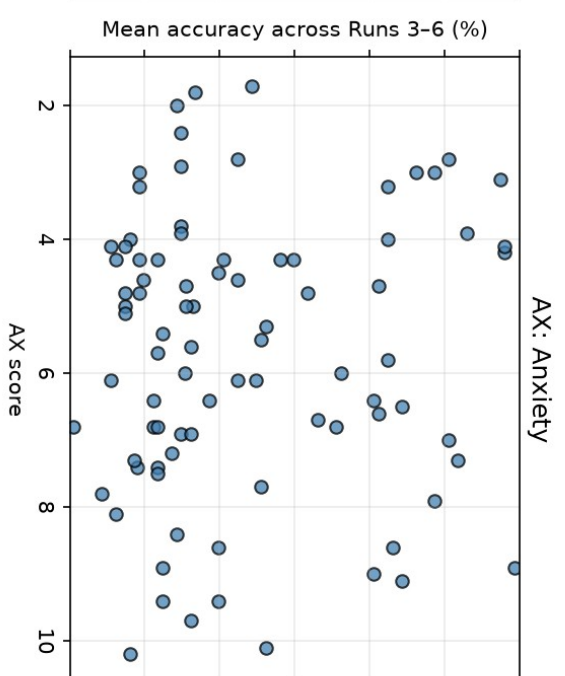

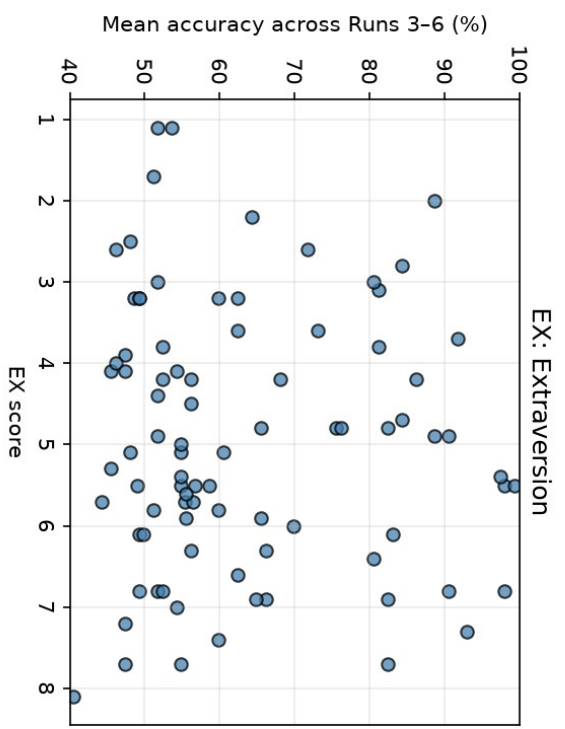

Gender 2 (Woman) — Non-stimulus control
42 participants, 3,331 events

Distribution of Participant Performance by Run

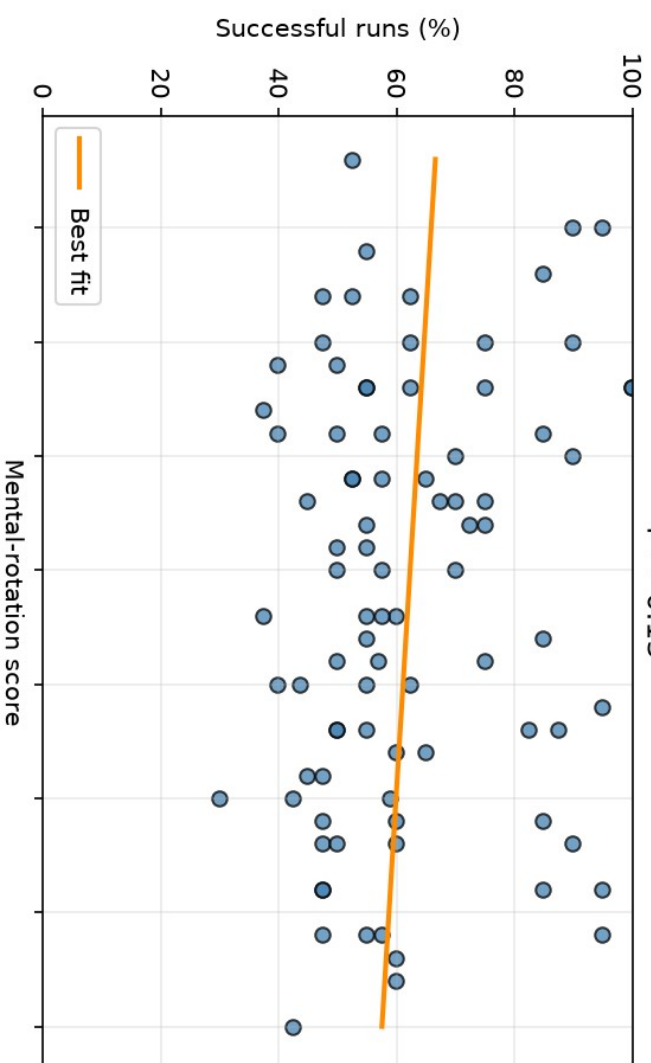

16PF5 Broad Factors vs. Mean Online BCI Performance

Mental-Rotation Score vs. Online BCI Performance

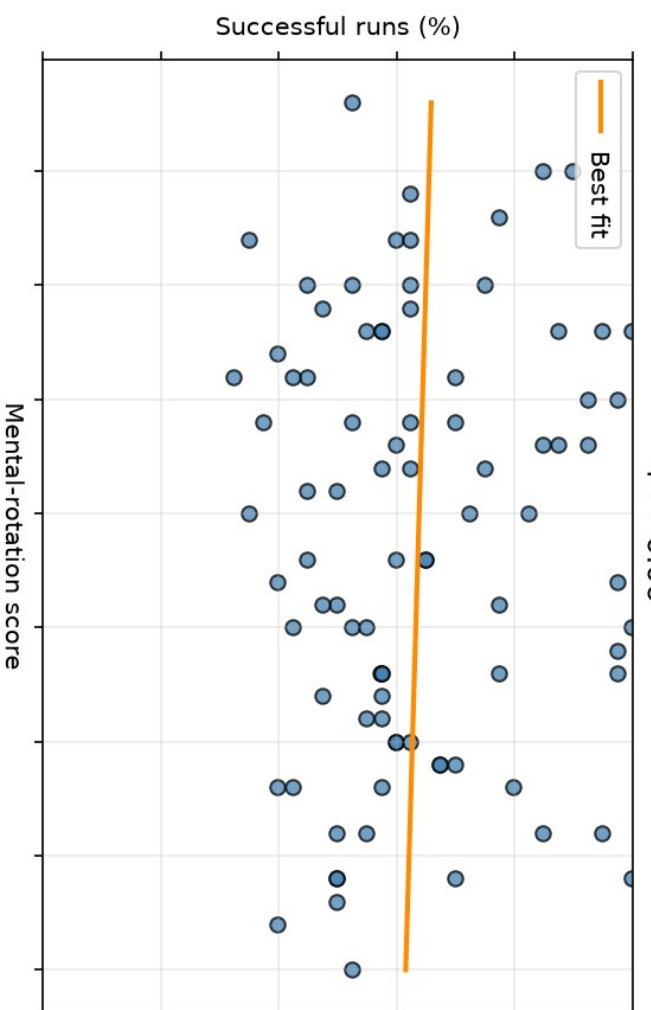

Mental-Rotation Score vs. Perf_RUN_3

$r = -0.13$

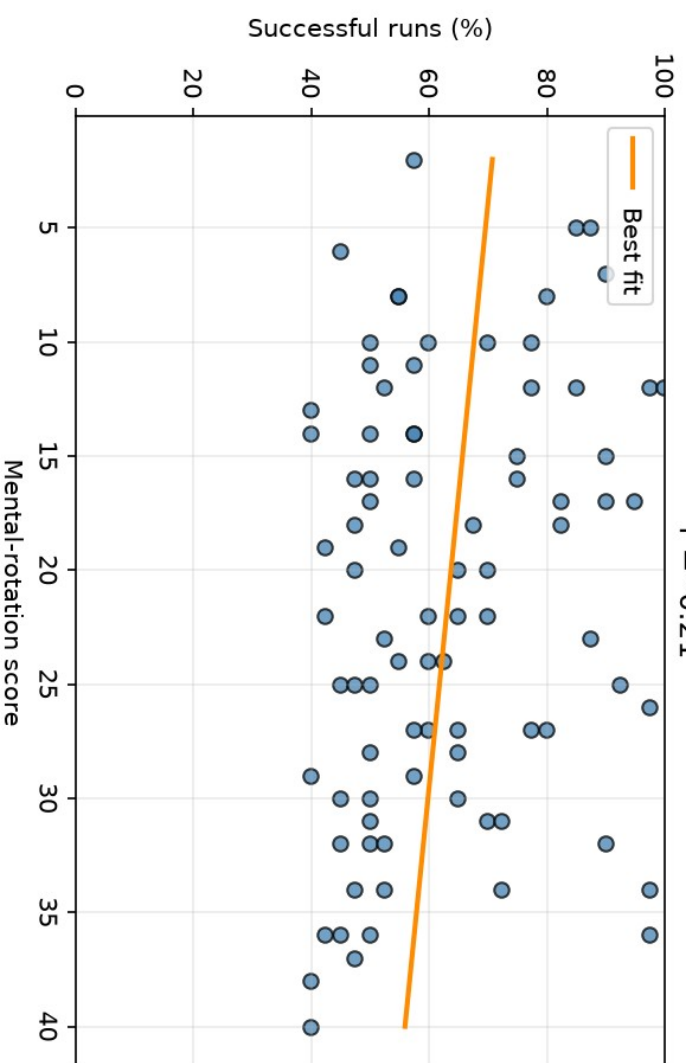

Mental-Rotation Score vs. Perf_RUN_4

$r = -0.06$

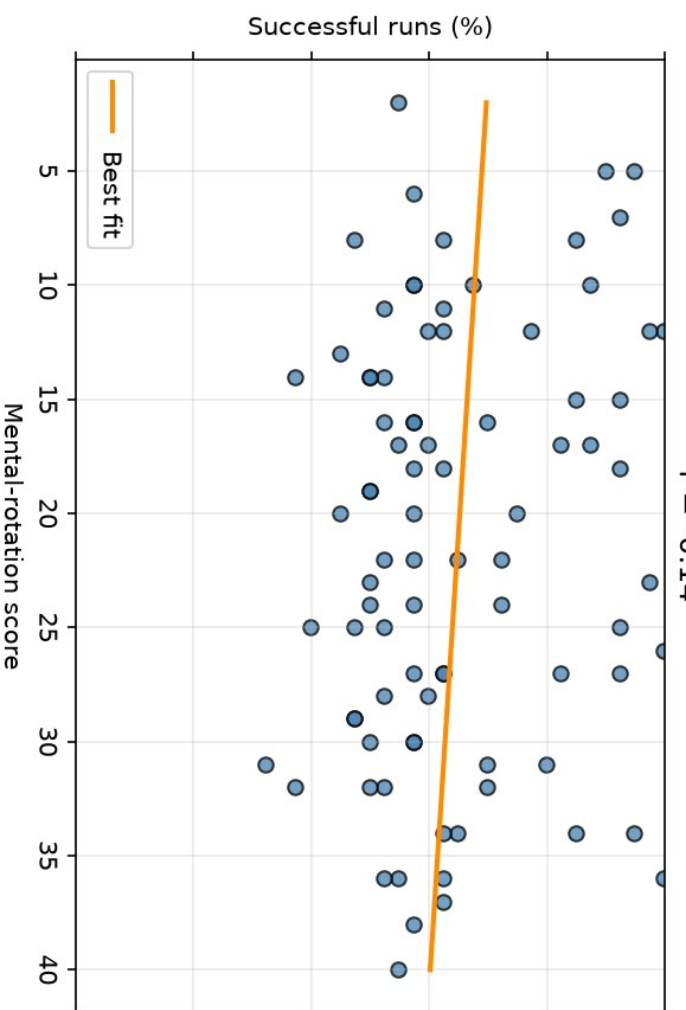

Mental-Rotation Score vs. Perf_RUN_5

$r = -0.21$

Mental-Rotation Score vs. Perf_RUN_6

$r = -0.14$

PRE-Session Measures vs. Mean Online BCI Performance (Bar Graphs)
